

# Seldén 'Y' boom

The Seldén 'Y' boom is a Park Avenue type carbon boom designed to allow easier reefing and sail stowage for the larger cruising yacht. Lazy jacks guide the sail on to the top of the boom while the beautifully shaped wings of the 'Y' boom help to catch and retain the mainsail when lowered. A sail cover is then zip closed over the top of the sail. Single line reefing and boom lights can be specified as options. 'Y' booms can only be supplied with a painted finish.

Beautifully shaped tapered profile. Picture shows integral inboard end fitting with concealed sheaves for the single line reefing luff lines, integral track for the sail cover and pad eyes for lazy jacks.

Outboard end showing outhaul track and car, concealed sheaves and pad eye for preventer.

Close detailing of the concealed inboard end sheaves.

Mainsheet pad eye faired in to underside of the boom.

LED boom light option.
